Vibe Coding Chat History

Cleaned transcript of the Claude conversation for the Maze Chase project

The original PDF contained the same conversation but had large blank areas and line-wrapping artifacts. This version reorganizes

the extracted text into a more readable document while preserving the available conversation content.

Conversation transcript — page 1

Claude finished the response

Drafting precise edits for the HUD and game-over overlay code.

for the HUD and gameover overlay code.

Task 4 needs edits

in reset(),

update() and

draw(). Nothing in

entities.py,

maze.py or main.py

changes, and the

enemy BFS logic is

untouched.

game/game_engi

ne.py

1. In reset(), add

this line after the

Task 3 lines:

self.score = 0

2. Replace the

whole update()

method (Tasks 1 to

3 are kept as they

are):

def update(self):

if self.caught

or self.won: return

now =

Conversation transcript — page 2

```
pygame.time.get_ticks()
if now self.last_speedup
>= 15000:
self.last_speedup =
now
if
self.enemies[0].move_interval > 5:
self.speed_tier +=
1
for enemy
in self.enemies:
enemy.move_interval
= max(5,
enemy.move_interval
- 2)
if self.frozen
and now >=
self.freeze_end:
self.frozen
= False
keys =
pygame.key.get_pressed()
self.player.move(ke
ys, self.walls,
ROWS, COLS)
if
self.pellet_active
```

Conversation transcript — page 3

and

```
self.player.rect.colliderect(self.pellet_rect):
```

```
self.pellet_active
```

```
= False
```

```
self.frozen
```

```
= True
```

```
self.freeze_end =
```

```
now + 5000
```

```
if not
```

```
self.frozen:
```

```
for enemy
```

```
in self.enemies:
```

```
enemy.update(self.w
```

```
alls, self.player,
```

```
ROWS, COLS)
```

```
for enemy in
```

```
self.enemies:
```

```
if
```

```
self.player.rect.colliderect(enemy.rect):
```

```
self.caught = True
```

```
if
```

```
self.player.rect.colliderect(self.exit_rect):
```

```
self.won =
```

```
True
```

```
if not
```

Page 4

Conversation transcript — page 4

self.caught and not

self.won:

self.score

+= 1

3. In draw(), add

the HUD text next

to the Task 2 tier

text:

score_text =

self.speed_font.render(f"Survived:

{self.score //

60}s", True, (255,

255, 255))

self.screen.blit(sc

ore_text,

(self.screen.get_wi

dth() score_text.get_widt

h() - 10, 34))

This sits top-right,

just under "Enemy

speed: tier N". If it

overlaps your

existing HUD,

change the 34.

4. On the gameover overlay, find

the block in draw()

that runs when

self.caught is true

Conversation transcript — page 5

Vibe Coding Chat History

Page 5

Conversation transcript — page 5

(the one that draws

the "caught"

message) and add

this inside it, after

the existing text:

```
final_text =
```

```
self.speed_font.render(f"Final score:
```

```
{self.score // 60}s
```

```
survived", True,
```

```
(255, 255, 255))
```

```
self.screen.blit(fi
```

```
nal_text,
```

```
((self.screen.get_w
```

```
idth() final_text.get_widt
```

```
h()) // 2,
```

```
self.screen.get_height() // 2 + 40))
```

The + 40 puts it

below the screen

center. Adjust it if it

collides with your

overlay's existing

lines.

What changed

```
reset():
```

```
self.score = 0
```

runs on the first

start and on every R

Conversation transcript — page 6

Vibe Coding Chat History

Page 6

Conversation transcript — page 6

restart, provided

your R key calls

`reset()`.

`update()`: the score

goes up by 1 at the

end of each frame,

and only if the

player wasn't caught

or didn't win on that

frame. The early

return at the top

already stops

scoring once the

game has ended, so

the final score stays

fixed.

□ HUD: it shows

Survived: X s

where X is

`self.score // 60`.

□ Game-over

overlay: it shows

the same value once

you're caught.

□ Tasks 1 to 3: the

enemy list, speed

ramp and freeze

logic are copied

unchanged into

`update()`.

Conversation transcript — page 7

Vibe Coding Chat History

Page 7

Conversation transcript — page 7

`self.score // 60`

counts seconds

correctly only if your

game runs at 60

FPS, meaning

`clock.tick(60)` in

`main.py`. With a

different FPS value,

replace 60 with that

number.

I've only seen

fragments of your

`draw()`, so if the

overlay edit doesn't

fit, paste your

`draw()` method and

I'll return it with the

changes in place.

One correction before I

apply Task 4:

Please make the final

survival score appear

on BOTH the CAUGHT

and ESCAPED overlays,

because the

requirement says "On

game over, show the

final score on the

overlay."

Keep everything else

exactly the same.

Give me the complete

updated

`game/game_engine.py`

Conversation transcript — page 8

so I can copy-paste it directly.

Do not modify entities.py, maze.py, or main.py.

Drafting a single code block to show the final score. score.

I can't give you the complete

game/game_engine

.py, because I've

only ever seen

fragments of it:

update(), two lines

of draw(), and the

enemy line in

reset(). A

"complete file"

would mean

inventing your

imports, __init__,

event handling,

HUD and overlay

code, and pasting

that over your

working file could

break it. Your

correction fits in one

small edit.

Conversation transcript — page 9

Change in

`draw()`

1. Delete the
caught-only block I
gave you earlier (the
`final_text` lines
inside the
`self.caught`
branch), so the
score isn't drawn
twice.

2. Add this at the
very end of
`draw()`, after
everything else is
drawn, including
both overlays and
before `pygame.display.flip()` if `draw()`
calls it:
if `self.caught` or
`self.won`:
`final_text =`
`self.speed_font.render(f"Final score:`
`{self.score // 60}s`
`survived", True,`
`(255, 255, 255))`
`self.screen.blit(fi`

Conversation transcript — page 10

Vibe Coding Chat History

Page 10

```
nal_text,  
((self.screen.get_w  
idth() final_text.get_wid  
th()) // 2,  
self.screen.get_height() // 2 + 40))
```

Putting it last means
it draws on top of
whichever overlay is
showing (CAUGHT
or ESCAPED). You
don't need to find or
edit either overlay
block.

What changed

- The final score now
shows whenever
self.caught or
self.won is true.

- update() already
stops adding to the
score once either
state is set, so the
number stays fixed
on the overlay.

- Everything else is
unchanged:
reset(), update(),

Page 11

Conversation transcript — page 11

the HUD score text,

and Tasks 1 to 3.

If the text overlaps

your overlay's

message, change the

+ 40 offset.

If you paste your full

game_engine.py as

text in your next

message, I'll return

the complete file

with every task

applied.
